50% DENTAL SPECIAL

Dogs have teeth, too!

Imagine what would happen if you didn't care for your teeth regularly. The same basics of dental care also apply to your pet's teeth.

Periodontal disease is the most common disease in dogs and cats! About 85% of dogs and cats have some form of it and are vulnerable to the pain, bad breath and tooth loss that could follow. Chronic infections can spread to the heart, liver, lungs, and kidneys, where they can do even more damage.

85% of adult pets have periodontal disease. Does Yours?

During dental months (Nov 2013 – April 2014) we are offering 50% dental special.

Ask us to take advantage of this special. Call us at (301) 589-1344 or email at ambassadoranimal@verizon.net

Canine

Stage 1 - Gingivitis

Margin of attached gingiva (gum) is inflamed and swollen. Plaque covering teeth. Treatment can reverse condition.

Feline

Stage 2 - Early Periodontitis

Entire attached gum is inflamed and swollen. Mouth is painful and odor begins to be noticeable. Professional treatment and home dental care can prevent this from becoming irreversible.

Stage 3 - Moderate Periodontitis

Cherry red and bleeding attached gum is being destroyed by infection and calculus (tartar). Sore mouth affects eating and behavior. Bad breath is present. Beginning of periodontal disease. May become irreversible.

Stage 4 - Advanced Periodontitis

Chronic bacterial infection is destroying the gum, tooth and bone. Bacteria may be spreading throughout the entire body via the bloodstream and may damage the kidneys, liver and heart.
